SC 5P - SC 6P

SILVER CABLE

Features:

- Hybrid Cu / Ag conductors
- Teflon conductor isolation
- Symmetrical construction
- Excellent dielectric performance
- Thermal resistant
- Only silver tin soldering
- Aging free
- Insensitive for moist and UV light
- Signal direction indication
- Special SC treating
- Very broad bandwidth
- No loss of dynamics
- And very 'musical'

Van Medevoort Audio certainly knows the importance of good, long lasting connections and connectors, especially in her vM series electronics. Therefore they use since many years, with much success, silver components in the signal path. Not only silvered wire (vM Silver Wire), but also silver in contact connections, capacitors, switches, soldering tin, etc. If the material silver, seen audiophile, the best is for internal power supply and signal transport, than is it of course also very suitable as audio cable for external transport. The core exist of absolutely oxygen free copper ('OFC') with an extreme high purity degree. This conductor is silver plated via an electrolytic process. Just these two elements in their high purity and special hybrid combination, makes together the best core material for audio. The core isolation is Teflon: the best isolation around the wires that exists.

Van Medevoort has for you a clear and affordable audio cable line, sold under the brand name vM Silver Cable and available in several models, constructions and lengths.

Specifications:	Signal cable digital	1D	1x 75 cm	1 cable	RCA connectors
	Signal cable analog	3S	2x 75 cm	stereo set	RCA / XLR connectors
		5S	2x 75 cm	stereo set	RCA / XLR connectors
	Loudspeaker cable	16R	/ 100 cm	1 cable	Spades / Banana conn.
		26R	/ 100 cm	1 cable	Spades / Banana conn.
		36R	/ 100 cm	1 cable	Spades / Banana conn.
	Mains cable 230 V	5P	/ 100 cm	1 cable	IEC or 6V socket
		6P	/ 100 cm	1 cable	IEC or 6V socket

For other lengths and/or construction, see pricelist.

Options: vM Silver Cable accessories.
